

T-8 AND T-5 LIGHTING SOLUTION

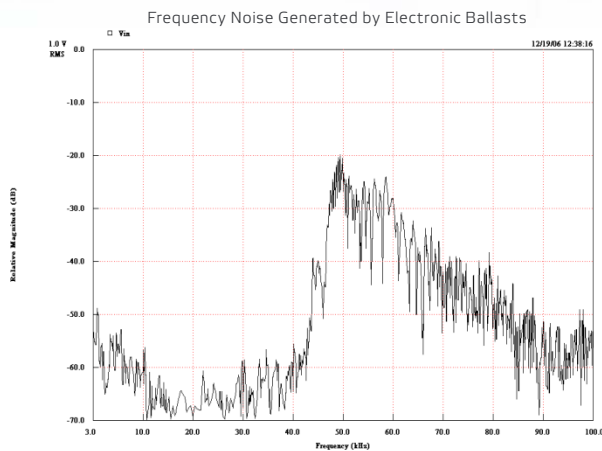

Fluorescent lighting is the first and best step to overall energy savings in the modern facility. But electronic ballasts are very susceptible to transient voltage spikes and high frequency noise that can ruin return on investment and add costly maintenance and time consuming warranty issues.

ENVIRONMENTAL POTENTIALS HAS THE SOLUTION!

EP's patented wave tracking technology absorbs and dissipates high frequency noise and removes it from electrical distribution without discharging energy to ground. EP Technology eliminates the need for individual ballast filters and TVSS and will reduce lighting maintenance from 50% to 70%.
